Sustainability Statement

We ensure that we operate to the highest ethical standards in relation to environmental sustainability, healthy eating and waste reduction and recycling.

About food and supply:

- We source our ingredients and purchase from specially selected local suppliers who are as close to our premises as possible.
- We do our best to support British farmers and suppliers by using many seasonal fruits, vegetables, meats and fish with effective menu planning.
- We audit all our central kitchens to ensure they maintain the highest standards of sustainable food use and waste reduction
- We recycle all cardboard, and plastic in our central kitchens and head office.

About Packaging:

All our packaging is now plastic free. All platter boxes are made with a plant based window lid on the top, which is fully compostable.

About deliveries to our clients:

All our kitchens are located in strategically in Central London. Therefore we deliver more than 80% of our clients by foot. This has a large environmental impact since we have very limited use of Vans, and very low carbon footprint.
